TSS signs are built for longevity however ignoring normal sign maintenance could drastically affect the appearance of your sign. With these guidelines you can insure a longer lasting better looking sign.

1.) **DO NOT** clean sign surfaces with Windex, or car wash chemicals (tire cleaner, soap, bug remover..etc.) See **example 1** at the bottom this can crack and damage the face. We recommend that you clean your sign face (cover) by using either WD40 or Brillianize applied with a soft towel on the inside and outside of the fixtures face. This helps remove the chemical and dirt build up and acts as a repellent for future dirt build up and also helps restore the signs luster.

TO ORDER
BRILLIANIZE CALL
TSS AT:
800-682-7446

2.) If moisture build up is an issue (see **Example 2**) we recommend checking the drainage holes at the bottom of the sign for any debris. In some cases of areas exposed to high levels of water spray, additional holes may have to be drilled.

EXAMPLE 1. THIS SIGN FACE WAS CLEANED WITH WINDEX OR CAR WASH CHEMICALS CAUSING IT TO CRACK.

EXAMPLE 2. THIS SIGN WAS NOT CLEANED REGULARLY AND ALSO DID NOT HAVE PROPER DRAINAGE. AS A RESULT ALGY BUILT UP ON THE BOTTOM.

THIS IS WHAT YOUR SIGN WILL LOOK LIKE IF IT IS PROPERLY MAINTAINED AND CLEANED WITH WD40 OR BRILLIANIZE ON THE INSIDE AND OUTSIDE OF THE FIXTURES FACE 3 TIMES A MONTH
